Enjoy yourself with the Selfie Stick!

Photographs have advanced rapidly throughout the years. First, there were black and white photographs which developed into color photographs. Today, technology has advanced so much that you can not only take pictures in color, but you can edit the photo to be whatever color or background you want it to be! But what about the way you take the photograph? When taking a picture, most people want the picture to be perfect. That is very difficult when some cameras only allow you to take a picture from one angle.

Well, I have news for you; your days of taking imperfect pictures are over. Taking a selfie will make taking beautiful pictures a much easier task. A selfie is a photograph that is taken when the camera is faced towards your front profile. On the device in which you are taking the selfie, you have the option to flip the camera so that it faces your face and others in the background. In other words, the whole gang can take a picture at once and you can take the picture and be in the picture. Taking a selfie is so much easier and safer than asking someone off the street to take pictures of you and your friends. But what if you are a short person and your arm can't extend long enough to get everyone in the picture? You can purchase a selfie stick. A selfie stick is a monopod used to take selfie photographs by positioning a smartphone or camera beyond the normal range of the arm. You can find them in many stores for a reasonable price. So if you and your friends decide to take that fabulous picture!
